

StaticWorx ESD Carpet

Carpet Construction

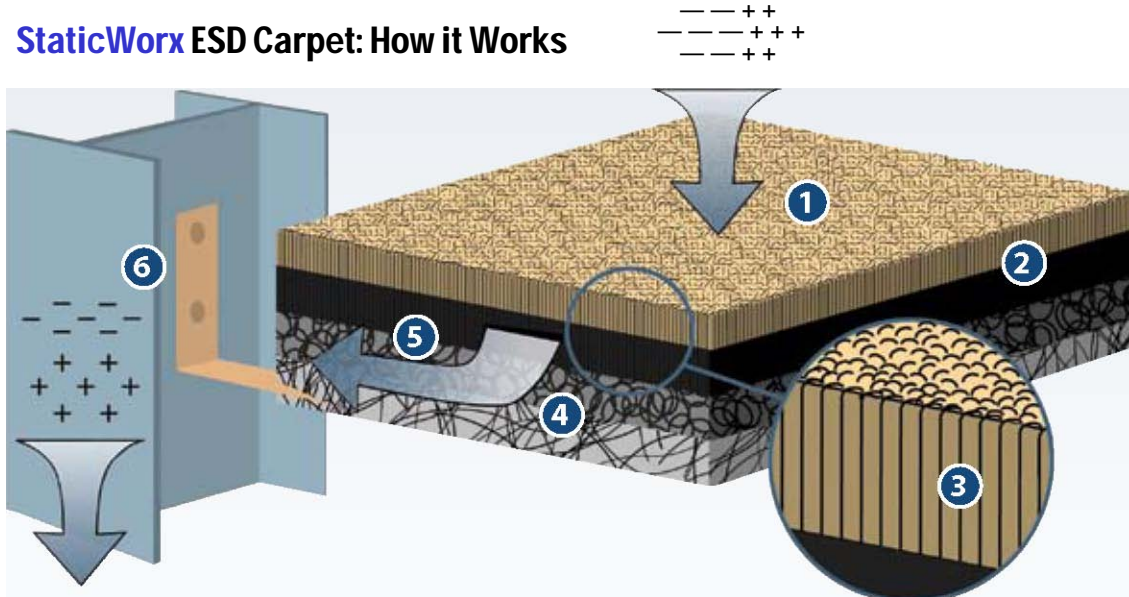

THE CONDUCTORS and RESISTORS SERIES

Key Features:

- | Redundant Conductivity
- | Permanent Performance
- | Meets ANSI/ESD S 20.20
- | Attractive Colors and Styles
- | Easily Installed Over Access Flooring, Concrete or VCT
- | Lifetime Warranty
- | Green Label Product, Recycled Material

StaticWorx ESD Carpet: How it Works

1. Conductive fibers withstand punishment without fracturing or losing conductivity, regardless of traffic.
2. Carbon StaticWorx ESD Carpet ensures electrical conductivity at a safe and controlled rate of dissipation.
3. The StaticWorx pre-coat, conductive fibers and backing create a redundant network that links the walking surface to the recycled backing StaticWorx backing.
4. Conductive fibers suspended through the adhesive provide electrical continuity throughout the tile installation. Tiles remain in electrical contact whether or not tiles touch one another.
5. Pressure-sensitive conductive adhesive provides a clean, easy and rapid installation. Our odor-free conductive adhesive dries in under one hour and can be walked on immediately.
6. Copper strap provides a bridge between the conductive floor installation and ground. Grounding options include electrical ground, system ground, building ground or floating ground, depending on application.
